

Bagues Putra Tawaqqal

baguesputratawaqqal@gmail.com | github.com/baguesputra | (+62) 822-5157-7759

I am a Software Developer with over 4 years of experience in developing and maintaining web-based applications. My primary focus is on backend and full-stack development, using PHP, JavaScript, and Python, with hands-on experience in Laravel, CodeIgniter, Node.js, React, Next.js, MySQL, PostgreSQL, and Git.

I am experienced in developing software based on business needs, from understanding and analyzing business processes, designing solutions, developing applications and APIs, to optimizing and maintaining systems. I believe good software is not only about writing quality code, but also about understanding how technology can simplify workflows, improve efficiency, and deliver real value to an organization.

In addition to software development, I have a background in IT infrastructure and system administration, including Linux, Windows Server, networking, VLAN, VPN, firewalls, Cisco, and MikroTik. This experience gives me a broader understanding of how applications are developed, deployed, and operated reliably in production environments.

I am currently focused on growing my career as a Software Developer, particularly in Backend and Full-Stack Development, while leveraging my understanding of business processes and IT infrastructure to build reliable, efficient, and maintainable software solutions.

Technical Skills

- | | |
|-------------------------|--|
| • Programming Languages | : JavaScript, PHP, Python |
| • Framework & Library | : CodeIgniter, Laravel, React, Next.js, Express, Flask, Django |
| • Backend & API | : Node.js, Rest API, API Integration |
| • Databases | : MySQL, PostgreSQL |
| • Development Tools | : Git, Github, Docker |
| • IT Infrastructure | : Linux, Server Configuration, Network, Mikrotik |

Pengalaman Kerja

IT Programmer

PT. Tata Optima Property

August 2026 – present | Banjarmasin, Indonesia

- Designed and developed internal business applications to support operational processes, including an employee cooperative management system and an internal tenant management system.
- Analyzed business requirements and operational workflows to design application features, database structures, and system flows aligned with organizational needs.

- Developed web-based applications and REST APIs using modern development technologies, with a focus on maintainability, performance, security, and scalability.
- Designed and implemented database structures, business logic, and application workflows to support transactional and operational requirements.
- Initiated and configured an internal GitLab environment to centralize source code repositories, improve project collaboration, and establish better version control practices for internal software development.
- Contributed to establishing development standards and workflows, including Git-based version control, repository management, and project organization for internal applications.

IT Koordinator

Rumah Sakit Amanah Medical Centre

January 2025 – August 2026 | Banjarmasin, Indonesia

- Developed, maintained, and enhanced a web-based Hospital Management Information System (SIMRS) using Python (Django), JavaScript, and SQL, including the development of new modules based on operational and business requirements.
- Analyzed business processes and designed application workflows and system architecture to support hospital operations and integrate with various internal systems and IP-based devices.
- Designed and implemented technical solutions with a focus on system reliability, scalability, security, and maintainability.
- Performed debugging, error handling, code analysis, and performance optimization to improve application stability and efficiency.
- Managed the end-to-end development process, including requirements analysis, application design, development, testing, deployment, documentation, and ongoing improvements.
- Managed application servers and databases, including installation, configuration, performance tuning, monitoring, and troubleshooting to support production applications.
- Implemented regular database and application backup and recovery procedures to maintain data integrity and system availability.
- Collaborated with management, internal teams, and external vendors on system integration, application development, digitalization initiatives, and technical evaluations.

IT Koordinator

PT. Mitra Megah Profitamas

February 2022 – January 2025 | Banjarmasin, Indonesia

- Developed and maintained internal web applications using Laravel, CodeIgniter, and Yii Framework, including debugging, feature development, and system improvements based on business requirements.
- Analyzed business processes and requirements to design and implement software solutions that improve operational efficiency and support day-to-day business activities.
- Managed and optimized MySQL/SQL databases, including database design, query development, and query optimization to improve application performance and reliability.

- Handled the end-to-end software development process, from requirements analysis and solution design to development, testing, deployment, and ongoing maintenance.
- Led the modernization and standardization of internal applications by migrating and developing systems using Laravel as the primary framework.
- Maintained and monitored application servers to ensure the availability, stability, and reliability of business applications in production environments.
- Managed MikroTik network infrastructure and Hikvision CCTV systems across the head office and branch locations as part of overall IT infrastructure support.

Freelance Programmer

February 2022 – Present | Banjarmasin, Indonesia

- Developed web applications and landing pages based on client requirements and project specifications.
- Built web-based systems with features such as authentication, data management, and API integration.
- Provided assistance and consultation for academic assignments and student projects involving web development.
- Performed basic website optimization, troubleshooting, and maintenance to ensure applications run properly.

Front-end Website Internship

Lyceum Batangas University

September 2019 | Batangas, Filipina

- Designing a website for the Faculty of Law and comprehending the entire development process from planning to deployment, while engaging in coursework and providing IT support across campus activities.
